RE: AES SSI Portal

Jim,

It's been a while. Hope you are well. The Indiana SSI Program continues to achieve milestones and produce ROI. I'm reaching out about the SSI Portal for Indiana Power Partners for continued access. Other than Duke Energy, I have held off on requesting funding access for the SSI Portals from individual power companies. Duke has funded since we began implementation of the SSI Program in Indiana as Erin was familiar with the value of the SSI Portal from her counterpart in Florida. Before asking for individual IPP support for their own individual SSI Portals, I wanted to wait until we had a significant volume of SSI Phase I sites that have been reviewed through local sites review workshops (current status map attached). In AES service area, Johson County is the only county yet to complete their SSI Phase I local sites review workshop. But we do have their workshop scheduled for 8/29 @ 9:00 am.

The individual Power Partner SSI portals are useful in managing SSI sites within respective service areas. Each IPP SSI Portal is customized such that you only see your SSI Phase I sites in your service area. We also publish GIS layers specific to your need and interest that only your team would be able to see. You can access the AES SSI Portal at https://ipl.strategicsitesinventory.com/. As sites advance through landowner engagement and due diligence the portal serves as a convenient resource for document storage and management and access. This includes marketing materials until sites graduate to public facing site and buildings database (e.g. ZoomProspector).

If AES would like to keep their IN SSI Portal I'll send you as short access agreement. The annual cost for each IPP is $2,500. If not interested, we can just take the AES SSI Portal down.

Thanks and please let me know if you have any questions or require additional information.
