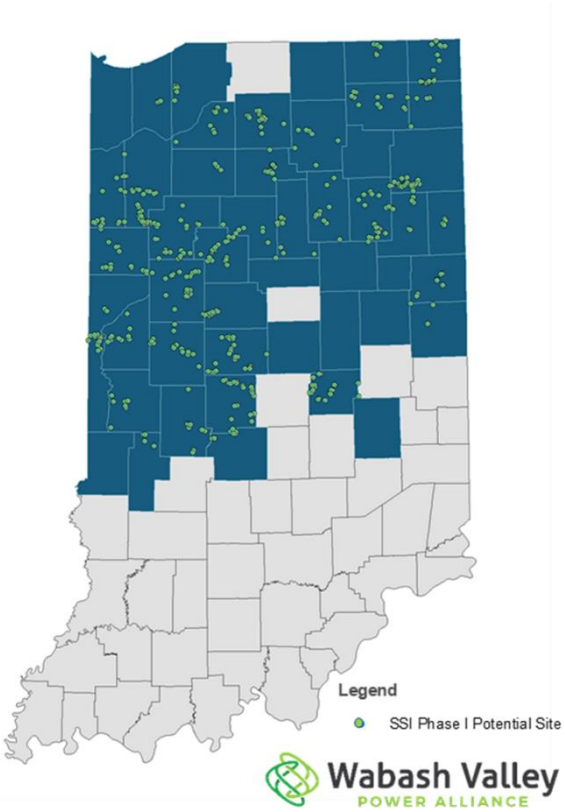
Introduction

This report presents the findings of the Strategic Sites Inventory (SSI) Phase II: Preliminary Due Diligence assessment of Site ID 18157-001 (referred to as the "Steele Industrial Site"), a 310.7-acre greenfield property located near the City of Lafayette, Indiana. Lafayette is located in Tippecanoe County and serves as the county seat. The Steele Industrial Site was nominated for advancement to SSI Phase II by officials from Tippecanoe County, Wabash Valley Power Authority (WVPA), and Tipmont REMC. WVPA is a non-profit electric cooperative serving an alliance of 23 member distribution co-ops across Indiana, Illinois, and Missouri. Tipmont REMC is the WVPA member distribution co-op that serves the site. WVPA and Tipmont REMC have partnered to fund this SSI Phase II study. *The subject site satisfies baseline quality criteria, aligns with Tippecanoe County industry targets, and is deemed competitive to attract high-value business investments in support of sustainable community job growth and economic prosperity.* Report site maps are included as **Appendix A**.

SSI QUALIFIED SITE

The SSI Program is an advance site selection initiative designed to develop an inventory of strategic real estate assets to attract quality job-creating business investments. In 2019, the Indiana Economic Development Corporation (IEDC) initiated the Strategic Sites Inventory (SSI) Program in the State of Indiana with *SSI Phase I: Site Discovery* for all 92 counties with a goal to increase economic development competitiveness at the community level by identifying new, top quality raw land sites ideally suited for industrial and commercial projects. Tippecanoe County was included in the initial IEDC-funded project and benefitted from the identification of two potential high-value sites for mega site and heavy industrial land uses. A subsequent investment by IEDC in 2020 included expanded SSI Phase I site searches to identify light industrial and agribusiness sites, increasing Tippecanoe County's total of quality SSI-identified sites to twenty-nine. A total of 463 sites have been identified within WPVA's served territory.



The subject site (Site ID 18157-001) was identified from the initial 2019 IEDC-funded SSI Phase I project for mega site and heavy industrial land uses. The subject site exhibits necessary competitive characteristics for SSI Phase II: Preliminary Due Diligence nomination. Details about the SSI Program phases are provided in **Appendix B**.

Leotta Location and Design (LL+D) has developed a systematic and effective methodology for screening potential sites for practical development as part of the SSI Phase II process. LL+D's site screening methodology is informed by fifteen-plus years of industrial and commercial site selection experience and economic development consulting in conjunction with demonstrated geospatial technology-based analysis and mapping expertise. LL+D staff and consulting partners include environmental science, civil and geotechnical engineering, landscape architecture, geospatial technologies, and economic devolvement experts who combine disciplines to identify and evaluate sites for industrial and commercial project uses.

The purpose of the SSI Phase II study is to provide a quantitative understanding of the subject site's advantages and challenges in conjunction with a rough order-of-magnitude (ROM) cost estimate to improve site functional use and mitigate development challenges. The SSI Phase II study is a desktop-based preliminary engineering and environmental due diligence exercise performed by discipline-specific experts with experience in industrial and commercial site selection and property development. Study of the subject site's physical and surrounding characteristics, assets, and impediments for development are reviewed in sufficient detail to formulate a defendable opinion on the competitive strength of the property for an economic development use.

The SSI Phase II study is intended to expose any potential "fatal flaws" that indicate significant development incumbrances or grossly compromise site competitiveness. The desktop review relies on an array of engineering, environmental, ecological, and cultural GIS data in conjunction with aerial imagery and available public records to assess current site development advantages and challenges. The SSI Phase II assessment concludes with the formulation of ROM cost estimates for improving site functional use and mitigating any potential development challenges.

LL+D's team of site selection and economic development experts provided an in-depth study of the subject site through an objective measure of physical features and surrounding characteristics and conditions across engineering, environmental, ecological, and cultural concerns. Overall site competitiveness for an economic development land use is made within the context of location requirements for permitting, construction, and operations relevant to the intended site project land use. **The SSI Phase II findings are expressed along three principal site assessment parameters:**

Condition of the site's physical characteristics including assessment of engineering and environmental development advantages and challenges.

Connection to transportation assets, utility infrastructure, and major market areas.

Community support including available workforce, cultural feature impacts, and business climate for economic development.

A description of the subject site and summary of SSI Phase II findings is provided below.

Site Description

The Steele Industrial Site is an undeveloped (greenfield) property approximately 310.7 acres in total size located at the intersection of Interstate 65 (I-65) and Indiana State Road 38 (SR-38) adjacent to the municipal boundary of the City of Lafayette, Indiana. The subject site is comprised of four tax parcels, or tracts, independently owned by one landowner of record. **Appendix C** provides a summary of site parcel ownership information.

Site ID 18157-001 northeast view from Newcastle Road

Current site condition is characterized by clearcut agricultural land for the majority of the site. The property has historically been used for farming. Six structures are currently observed within the northern central interior of the site. These structures appear to be residential and farm-related and are contained in approximately 2 acres of the site. The cultural setting is metropolitan with primarily industrial (distribution and manufacturing) and agricultural land use surrounding the site. No significant commercial or residential activity is observed on or near the site. The site is bordered by I-65 to the east, Newcastle Road to the west, and a Norfolk Southern rail line and SR-38 to the north. *A contiguous "buildable area" was defined within the confines of the subject site boundary intended to be most advantageous for construction. The Steele Industrial Site buildable area is approximately 216.2 acres and was defined to avoid wetlands and legal drainage ditches.*

Geographic Location

Located in west central Indiana, Tippecanoe County provides a metropolitan setting along the high-commercial activity I-65 corridor connecting Indianapolis to Chicago, with access to major markets throughout the state. *The site is situated 63 miles northwest of the heart of Indianapolis, IN and 125 miles southeast of Chicago, IL*. Projects considering the Steele Industrial Site will benefit from locating in a metropolitan community strongly embedded in economic growth and prosperity amongst a primary network of connectivity while avoiding the heavy traffic congestion and higher land costs typical of more heavily urbanized areas. Access surrounding labor markets at competitive wage rates is well within reach of the subject site.

Site ID 18157-001 Site Vicinity

The subject site is located just outside the municipal boundary of the City of Lafayette, which has a 2019 estimated population of 71,721. Lafayette serves as the county seat for Tippecanoe County, which has a 2019 estimated population of 195,732. According to the Greater Lafayette government website, the Greater Lafayette area covers 200,245 total population and encompasses the cities of Lafayette and West Lafayette. *More than 419,384 total residential population live within a 45-minute drive of the site. Approximately 51,432 businesses employing 875,023 people are located within the same 60-minute travel time*. Manufacturing and transportation and warehousing account for 5.3% of businesses employing 12.7% of total workforce within a 60-minute drive of the site. A site vicinity map is provided in **Appendix A**.

Current Ownership

The subject site is comprised of four contiguous tax parcels, or tracts, and is reported by the Tippecanoe County Beacon interactive public access portal website to have a single owner. *The current owner of record is Steele Land Trust according to the Tippecanoe County Beacon portal, while county-provided information lists TM Crowley as the current landowner. The subject site is comprised of four tracts of approximately 65.5, 139.7, 51.6, and 54.0 acres.* Tippecanoe County economic development officials have confirmed that the landowner is actively promoting the site for sale. As of the date of this report, no known real estate purchase option agreement is held with any person or organization with the landowner for any portion of the site. *LL+D strongly recommends that Tippecanoe County Government or WVPA pursue and secure a real estate purchase option agreement with the landowner. This is critically important to reduce uncertainty regarding property availability and price*. A "Site Parcel Configuration" map is included in **Appendix A**.

Findings Summary

The findings from the SSI Phase II study are summarized below. A discussion of key site development considerations is provided within the context of overall site physical **condition**, **connection** to infrastructure, and **community** support. LL+D's site competitiveness assessment across these key site development parameters are presented below.

Condition

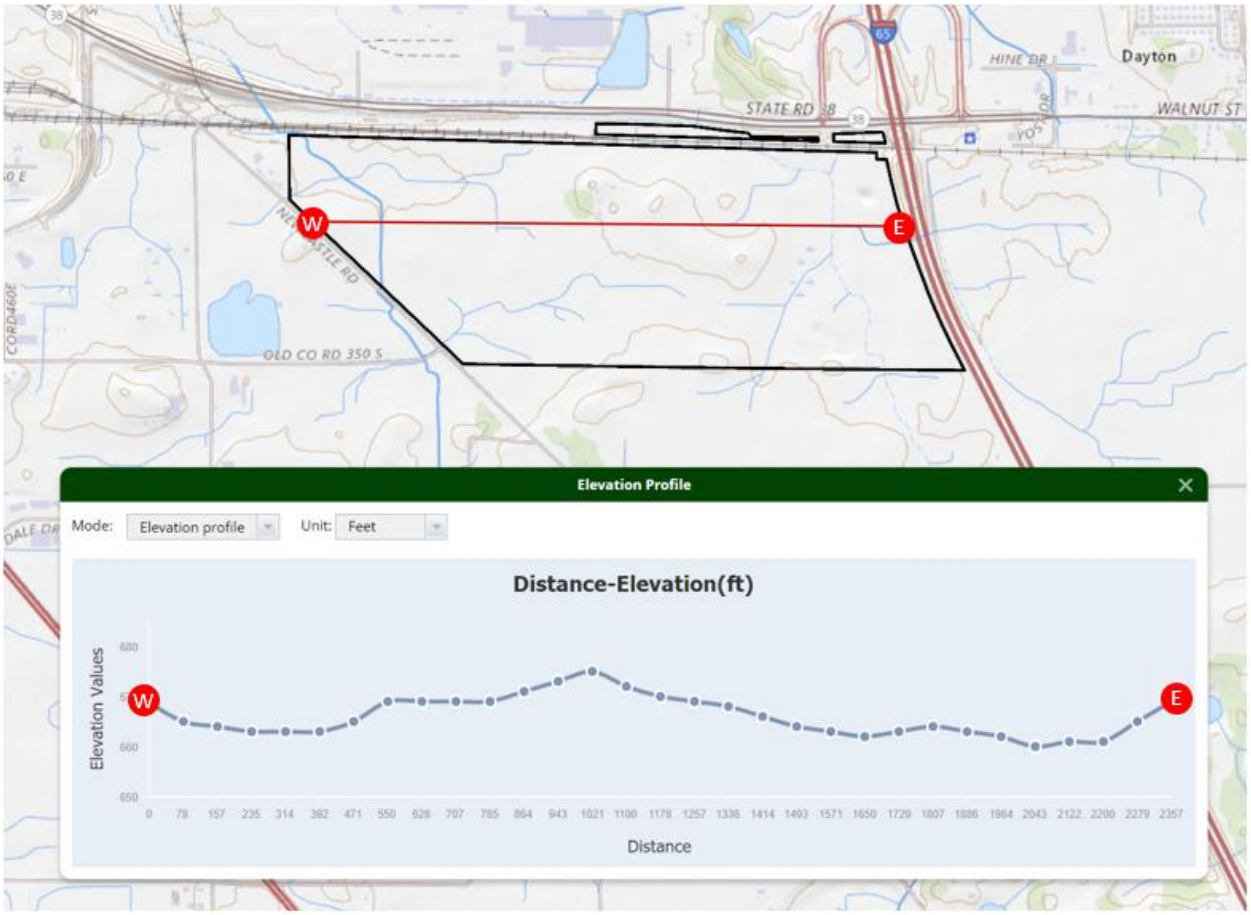
Site conditions are defined as the physical characteristics of the subject property including geometric configuration, surface features, engineering, ecological and environmental concerns, and land use compatibility. *Overall, conditions for the Tippecanoe County Industrial Site are favorable for development for the site's highest and best use as an economic development real estate asset*.

Size and Configuration of the subject site is sufficient in both acreage and configuration to support a Light Industrial, Manufacturing, or Heavy Agribusiness operation. *Total site area is approximately 310.7 acres, measuring approximately 6,296 feet across an east-west axis at its widest point and approximately 2,314 feet across a north-south axis*. The site is geometrically regular in configuration with adequate land between site boundaries providing ample acreage for a contiguous buildable area. The northern site

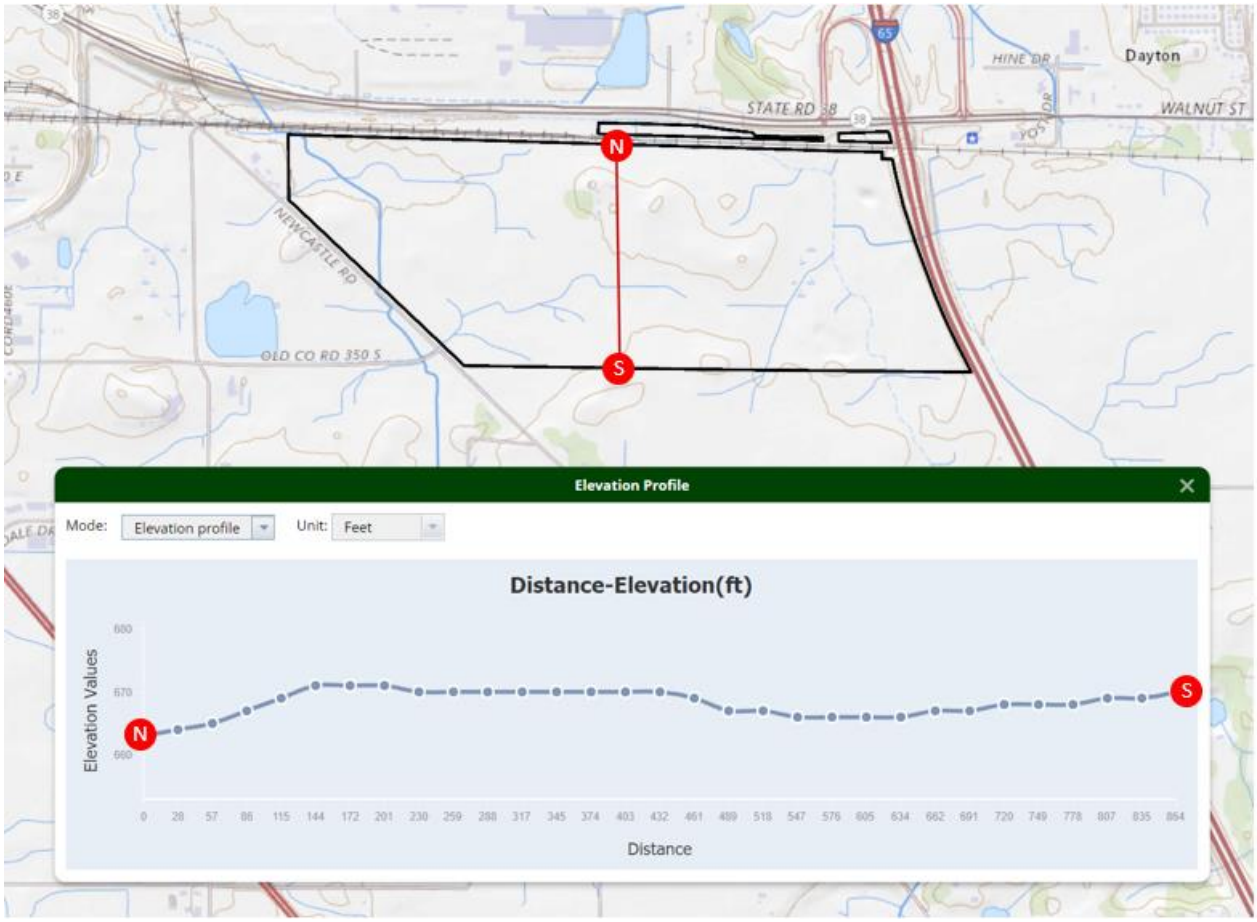
boundary is bordered by a Norfolk Southern (NS) Rail Line, with IN-38 running parallel with the north side of the NS line. Interstate 65 (I-65) runs along the site's eastern boundary providing approximately 2336 ft (0.4 Miles) of interstate frontage.

A contiguous buildable area totaling 216.2 acres has been defined to optimize facility construction on the site by positioning an operational footprint to avoid wet and flood-prone areas. The buildable area occupies the majority of the site and is comprised of four tracts with a single owner. Site access is supported by multiple potential ingress/egress points located on Newcastle Rd along the site's southwestern boundary. There is an additional ingress/egress point with a rail crossing located on the northern boundary of the site coming from IN-38.

Elevation/Topography presents minor grading challenges to prepare the site for development. *Based on a review of 5-meter cell size, LiDAR-derived digital elevation models (DEM) for the full site extent, a minimum elevation of 658 feet mean sea level (MSL) and maximum elevation of 684 feet MSL is reported. The 2012 DEM indicate an average buildable area elevation of 666 feet MSL and average slope of 0.4 percent*.



18157-001 Elevation Profile West-East (USGS 3DEP Viewer)



18157-001 Elevation Profile North-South (USGS 3DEP Viewer)

The site slopes generally from the center outward, the center being the highest point on the site. The lowest elevations are found along the northeast and northwestern portions of the site. Average site elevation and topographic variability may present cut-fill opportunities for use of onsite fill for grading/leveling. This is subject to an onsite geotechnical engineering investigation to determine suitability of soil properties for construction. As well, naturally occurring sloping topography may provide passive areas for site buildable area drainage and stormwater retention. LiDAR and 2-ft contour map provided as **Appendix A**.

Land Cover assessment is useful for identifying site design constraints and/or potential encumbrances that may be encountered during site development such as extensive clearing and grubbing, drainage concerns, etc. The type of vegetative cover is used in conjunction with soil types, elevation, and hydrography data for interpretation of environmentally sensitive conditions such as wetlands and potential habitat for Threatened and Endangered (T&E) species and other species of concern (discussed later in this report). Beneficially, certain land cover features may reveal commercial value of forested areas or be desirable to incorporate into site design. Features such as densely wooded areas may provide

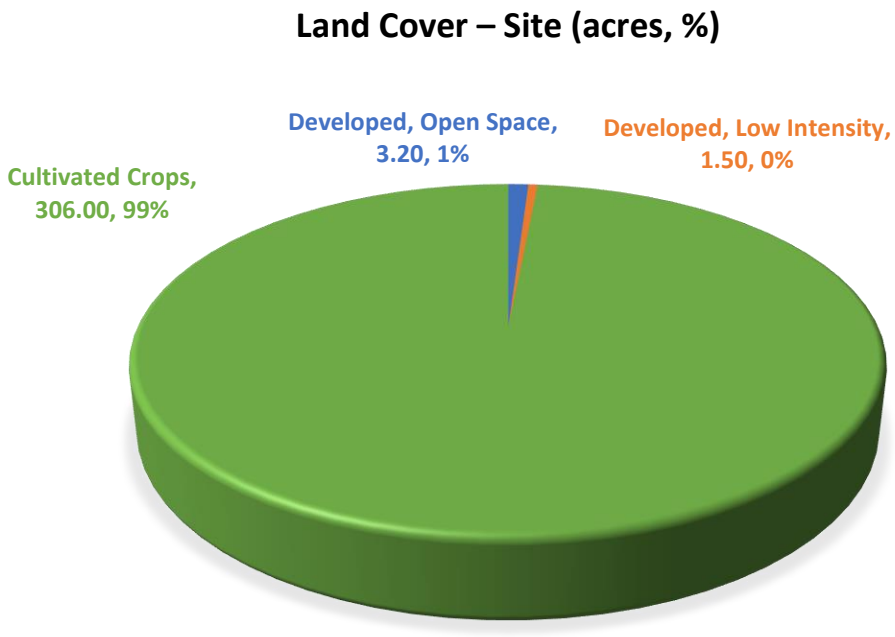
a desirable buffer during construction and/or during facility operations for line of sight and noise control. Further, wetland areas may be integrated into site plans providing an element of design aesthetics.

Two primary informational sources were used to assess land cover characteristics:

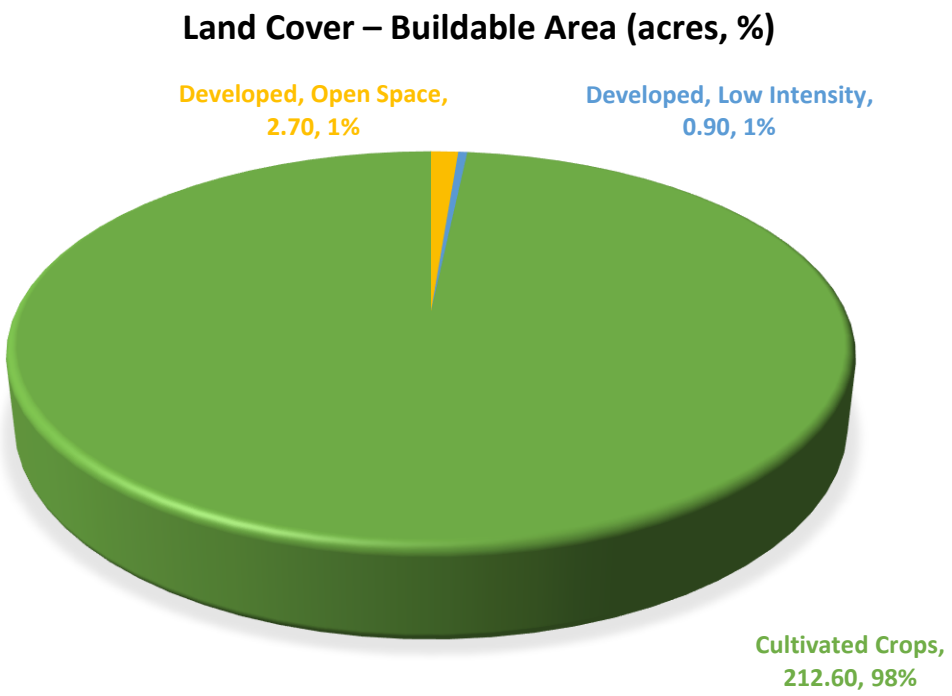
1) *Recent high-resolution color aerial imagery* (ESRI/Google Earth 2017). Recent and past aerial imagery provides useful observational data for assessing current land cover conditions as well as any notable changes over time. However, aerial imagery alone cannot be used without additional data sources to provide a more specific delineation of land cover type. For example, densely wooded areas are readily observed from aerial imagery, however, determination of forest composition is largely indeterminate without other remotely-sensed inputs (i.e., color infrared imagery) or ground-based observation.

2) The Multi-Resolution Land Characteristics Consortium (MRLC), National Land Cover Database (NLCD). The National Land Cover Database (NLCD) provides nationwide data on land cover and land cover change at a 30m resolution with a 16-class legend based on a modified Anderson Level II classification system. NLCD 2019 represents the latest evolution of NLCD land cover products focused on providing innovative land cover and land cover change data for the Nation. NLCD 2019 offers 8 integrated epochs of land cover for years 2001, 2004, 2006, 2008, 2011, 2013, 2016, and 2019. Developed classes in these years are directly derived from percent developed impervious surface and include a descriptor label that identifies the type of each impervious surface pixel. The NLCD Land Cover change index combines information from all years of land cover change and provides a simple and comprehensive way to visualize change from all 8 dates of land cover in a single layer.

Based on a review of the GMRLC NLCD dataset, land cover for the site and buildable area consists of the following classified areas (acres, percent cover):



The site buildable area is predominantly classified as Cultivated Crops.



A Land cover map is provided in **Appendix A**.

Hydrography and Flood Risk were evaluated by consulting USGS National Hydrography Dataset (NHD), a geospatial database which identifies stream segments or reaches that make up the nation's surface water drainage system, and FEMA National Flood Hazard Layer (NFHL), a geospatial database that contains current effective flood hazard data. *Based on a review of NHD and NFHL data, the site and buildable area are highly favorable for site development with low flood risk and minimal recorded/observed significant hydrography features. 100% of the site is outside the FEMA-designated flood hazard area, designated as Flood Zone X (within 0.2-percent-annual-chance flood or 500-year floodplain).* A hydrography and FEMA flood hazard map is provided in **Appendix A**.

Potential Wetlands are interpolated through observation of multiple data inputs including:

1) USGS National Wetlands Inventory (NWI) – developed for non-404 jurisdictional wetland mapping, so must be understood to have limited accuracy
2) LiDAR-derived digital elevation model (DEM) – topography/elevation
3) USGS NHD – hydrography
4) NRCS SSURGO – soils data provides hydric rating
5) Color-infrared imagery (where available) – for visual indication of wet or inundated areas (consulting differing years to ensure wet areas are not the result of a period flood event)

The NWI data is consulted as the principal indicator of potential wetlands, as the mapping methodology utilizes the above-referenced inputs in addition to other data sources in conjunction with qualified scientific review and quality control of interpolated wetlands delineation and taxonomy. As well, the NWI data provides a delineation of wetlands types, which is important in the estimation of permitting burden and potential compensatory mitigation costs. The additional data sources are consulted to ensure congruency of information suggestive of potential wetlands occurrence.

From the US EPA Wetland Regulatory Authority fact sheet, wetlands subject to Clean Water Act Section 404 are defined as "areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas." There are three primary conditions required for surface areas to be considered wetlands: 1) at least periodically, the land supports predominantly hydrophytes, 2) the substrate is predominantly undrained hydric soil, and 3) the substrate is saturated with water or covered by shallow water at some time during the growing season of each year. As determined by the U.S. Army Corps of Engineers, the federal agency responsible for enforcing federal laws protecting wetlands, an area must exhibit all three of the above-referenced conditions in order to be considered a wetland.

The following GIS-based information was consulted for the wetlands desktop assessment:

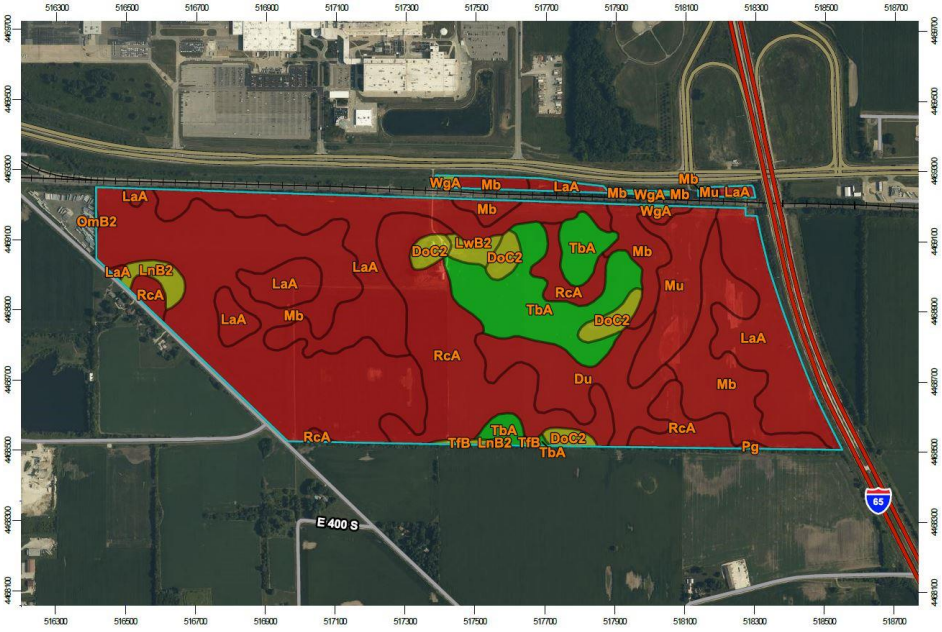
- **Hydrophytic Vegetation**: Recent and historical aerial imagery and NWI data.
- **Wetland Hydrology**: LiDAR-derived DEM, USGS topo maps, and high-resolution aerial imagery.
- **Hydric Soils**: NRCS Web Soil Survey and SSURGO data.

There are approximately 2.78 acres of potential wetlands reported on the subject site. SSURGO-reported map units of "Du, Mb, Mu, and Pg" are indicated as having a rating of 100% hydric components. These soils encompass 45.7% of the entirety of the site. SSURGO-reported map units of "LaA, RcA, TfB, and WgA" are indicated as having a rating of 3% hydric components. These soils encompass 40.1% of the entirety of the site. While no potential wetlands are reported within the buildable area, wetland permitting and mitigation may be required on the subject site. This appears to pose minimal development impediment to the site. NWI potential wetlands map is provided as **Appendix A**.

Soils conditions are assessed to identify potential advantages and/or challenges that could have an impact on site design, construction, and overall use of the site. Soil types are evaluated with respect to drainage and engineering performance for excavations, road construction, and building foundation support. Additionally, soil hydric potential is used in conjunction with wetlands data to increase confidence in potential wetlands interpretation (reported in previous section).

According to the United States Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS) Soil Survey Geographic Database (SSURGO) accessed via the NRCS Web Soil Survey, 34.3% (108.5 acres) of the subject site soils are classified as "Mahalasville silty loam, gravelly substratum" with a drainage class of "Poorly drained." Additionally, 22.8% (72.1 acres) and 16.7% (52.9 acres) of the subject site are classified as "Lafayette silt loam, 0 to 2 percent slopes" and "Raub-Brenton complex, 0 to 1 percent slopes" with drainage classes of "Somewhat poorly drained." Lastly, 9.7% (30.8 acres) of the subject site

are classified as "Tecumseh silt loam, 0 to 2 percent slopes" with a drainage class of "Well drained." Soil suitability properties for small commercial building construction across 85.1% (269.5 acres) of the subject site are indicated as "Very limited" for shallow (2 feet deep) reinforced-concrete spread footings. A portion (9.7% - 30.8 acres) of soils within the site boundary are indicated as "Not limited" for small commercial building construction. Lastly, 5.1% (16.3 acres) of the subject site are indicated as "Somewhat limited" for small commercial building construction. Based on the SSURGO data, soil conditions across the majority of the site are not favorable for development. Substantial foundation requirements may not be supported by site soil conditions and must be determined through on-site geotechnical engineering investigation. A SSURGO soils map is provided in **Appendix A**. The USDA, NRCR SSURGO soils reports for drainage class, small commercial buildings, and hydric rating are provided in **Appendix G**.



SSURGO Small Commercial Building Rating "not limited"

Sinkholes are common geological phenomenon occurring throughout the United States. They are only one of many kinds of karst landforms, which include caves, disappearing streams, springs, and underground drainage systems. Karst is a generic term which refers to the characteristic terrain produced by erosional processes associated with the chemical weathering and dissolution of limestone or dolomite.

A review of sinkhole data from the Sinkhole Areas and Sinking-Stream Basins Map developed by the Indiana Geological Survey provides sinkhole areas (SHA) and sinking-stream basins (SSB) associated with rocks of Silurian, Devonian, and Mississippian age in southern Indiana. Some sinkholes may exist outside the delineated areas, and some sinkholes may exist within the areas designated as sinking-stream basins, but such areas are not shown in this map. *The subject site lies entirely outside of the SHA and SSB areas.* The reliability of reported sinkhole occurrences is unknown. Potential site susceptibility to sinkholes must be determined through more thorough professional geological and geotechnical engineering investigation. An Indiana sinkhole map is provided as **Appendix A**.

Zoning and Land Use is administered and governed by Tippecanoe County. *According to Tippecanoe County Zoning Boundaries map, the site currently includes a single zoning district: "I3"* (Industrial). *The*

site's Future Land Use designation, according to the Tippecanoe County Phased Land Use Plan map, is zoned "Industrial." A Future Land Use Map (FLUM) and County Zoning Map is provided in **Appendix D.**

The apparent current land use of the subject site is derived from the Tippecanoe County Comprehensive Plan, recent aerial imagery, and Google Street View. *Recent aerial imagery shows current land use to be agricultural/vacant land as evidenced by minimal forested areas and lack of commercial structures*. *The aerial imagery-derived land use observations for the site agree with the Tippecanoe County Comprehensive Plan consisting of Agricultural, as well as the NLC Database – Cultivated Crops (306.0 acres, 98.5) land cover classifications. The Comprehensive Plan for Tippecanoe County-reported land cover for the buildable area is predominantly classified as Agricultural (212.6 acres, 99%).* Agricultural land use ensures against the relegation of farming activities to an as-yet-undeveloped holding status. The Industrial land use category is more diverse, including airports, utilities, and gravelling sites along with light and heavy manufacturing operations. The Comprehensive Plan for Tippecanoe County-reported land cover for the buildable area appears to correlate well to discernable land use observed on recent aerial imagery.

Current land use immediately surrounding the subject site to the north is characterized Heavy Industrial Manufacturing as observed from recent aerial imagery (ESRI/Google Earth 2018). Similar land uses are observed to the west of the site with Light Industrial/Distribution facilities. Land use to the South and East are seen as agricultural/mixed-use. Limited single residential structures are observed south of the site. Limited farm and commercial activity are observed east of the site immediately across I-65.

There is little to no indication of other land uses over the last sixty-four years based on a review of historical aerial imagery back to 1952 (provided by EDR Radius report). Ten epochs from 1952 to 2016 were reviewed to determine the sequential occupancy of the subject site. Since 1952, the subject site has been used consistently for agriculture. Historical aerial imagery is included in the EDR Radius Report provided as **Appendix H**.

Current site land use is ideal to support future development of the site for Industrial land uses. Surrounding tract future land use is indicated from the Phased Land Use Plan map to be Industrial in all directions surrounding the site. The current future land use designations for surrounding properties will likely not present perceived use compatibility issues with both prospective companies and the public.

Relevant excerpts from the Comprehensive Plan for Tippecanoe County and Unified Zoning Ordinance prescribing zoning and land use polices, standards, and statutory requirements for land development is included in **Appendix D**. The Tippecanoe County Comprehensive Plan and Unified Zoning Ordinance full documents should be consulted for detailed requirements pertaining to land use and zoning district designations.

Properly aligning zoning to site use will increase prospective business confidence in site permitting and plan approval timeframes and potentially reduce public hearings expressing development opposition while a prospective business is actively considering the site for a project. Compatibility with surrounding land use is vital to preserving the competitiveness of the site for an economic development use by preventing encroachment of land uses that would create real or perceived risk to prospective business considering the site for development.

Threatened and Endangered Species are defined under the federal Endangered Species Act (ESA) of 1973. The ESA provides a program for the conservation of threatened and endangered (T&E) plants and animals and the habitats in which they are found. The lead federal agencies for implementing ESA are the U.S. Fish and Wildlife Service (USFWS) and the U.S. National Oceanic and Atmospheric Administration (NOAA) Fisheries Service. The USFWS maintains a worldwide list of endangered species. Species include birds, insects, fish, reptiles, mammals, crustaceans, flowers, grasses, and trees.

The ESA defines an *endangered species* as "any species which is in danger of extinction throughout all or a significant portion of its range." Endangered species are automatically protected by prohibitions of several types of "take," including harming, harassing, collecting, or killing, under Section 9 of the ESA. There are some limited exceptions to these rules listed in Section 10 of the ESA. The ESA defines a *threatened species* as "any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." Threatened species receive protections through separate regulations issued under Section 4(d) of the ESA.

LL+D staff consulted the USFWS Information for Planning and Consultation (IPaC) online tool (https://ecos.fws.gov/ipac/) to assess potential project effect on listed species (*a plant or animal that receives federal protections under the Endangered Species Act. Species can be protected as endangered or threatened*) and other USFWS trust resources (*includes migratory birds, species listed as threatened and endangered under the Endangered Species Act, interjurisdictional fishes, marine mammals, wetlands, and lands managed by USFWS, such as national wildlife refuges*). The IPaC tool is a project planning tool that streamlines the USFWS environmental review process.

An IPaC Resource List was generated for the subject site. The Resource List is a report that automatically generates a list of species and other resources such as critical habitat (collectively referred to as trust resources) under USFWS jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

The IPaC trust resources report lists critical habitats and species of concern known or suspected to be found in habitats within regional ecology. The IPaC trust resources report found that the following species may potentially be affected by activities in this location:

- **Mammals**:
  - Indiana Bat (*Myotis sodalist*) – Endangered
  - Northern Long-eared Bat (*Myotis septentrionalis*) – Threatened
- **Insects**:
  - Monarch Butterfly (*Danaus plexippus*) – Candidate
- **Critical Habitats**:
  - There are no critical habitats at this location.

The IPaC report also identifies the Migratory Birds Resource List that identifies certain birds protected under the Migratory Bird Treaty Act of 1918 and the Bald and Golden Eagle Protection Act of 1940. Birds listed in the report are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention within the subject site location. The report does not include a list of every bird found within the site location, nor a guarantee that every bird on this list will be found within the site. The migratory bird list is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and altered to return a list of those birds reported as occurring in the 10km grid cell(s) that intersect the specified site study area location and have been identified as warranting special attention because they are a BCC species or an eagle (Eagle Protection Act requirements may apply) in that area.

The IPaC Migratory Birds Resource List (MBRL) provides a "Probability of Presence" summary indicating best understanding of when birds of concern are most likely to be present in the site area. *While there is no immediate known impact to site development, the MBRL should be further reviewed within the context of environmental permitting requirements by a qualified environmental/ecological consultant, as temporal migratory bird presence may affect the timing of certain construction-related activities on the subject site*. The IPaC trust resources and FNAI Biodiversity Matrix reports are provided in **Appendix E**.

Legacy Environmental Concerns consist of historical activities and events both on the subject site and on nearby tracts where harmful contaminants were released into soil, surface water, and groundwater. If not properly remediated under state and federal regulatory requirements by qualified environmental consultants/contractors, historical contamination liabilities may be inherited through chain of title even if the contamination originated offsite, particularly with migration through groundwater transport. The historical environmental event implication for site development depends on many factors including the type, extent, concentration, complexity, physical setting and surface/subsurface conditions, and time since the event, which may or may not pose a risk to prospective investors on site development.

A cursory review of the subject site and surrounding properties was conducted to identify any potential legacy environmental concerns. Informational resources consulted for this review include:

- EDR Radius Report;
- Recent and historical aerial imagery review;
- US Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) database (EDR Radius Report limits ECHO database search to the target property); and
- Information provided through interviews with local political officials, economic development representatives, and landowners (where available)

The EDR Radius Report searches environmental databases for permitted facilities, events, and other potential concerns occurring on the subject site and up to 1.0 mile of the site boundary. EDR use statement: "*A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site*

Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate".

Based on the results of the EDR Radius Report and a cursory review of historical aerial imagery, multiple environmental legacy concerns were identified near the subject site. Two facilities appearing in multiple databases were identified within 0.25 to 0.5 miles of the subject site in the EDR Mapped Sites Summary:

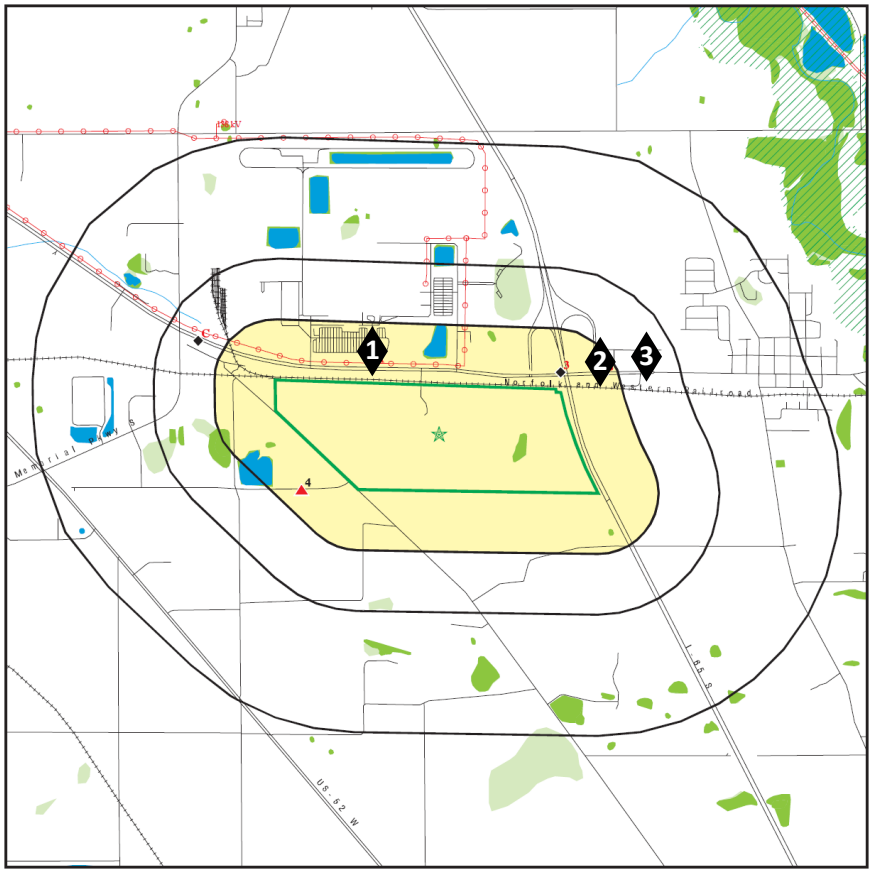
- ***Large Quantity Generator / Underground Storage Tank***
  - *Site Name: Subaru of Indiana Automotive Incorporated*
  - *Distance: within 0.125 miles*
  - *Elevation: lower (665' MSL)*
  - *Map ID* ◆1◆ *(overview map below)*

- ***Underground Storage Tank***
  - *Site Name: Circle K 2408*
  - *Distance: within 0.25 miles*
  - *Elevation: higher (670' MSL)*
  - *Map ID* ◆2◆

- ***Underground Storage Tank***
  - *Site Name: BP*
  - *Distance: within 0.5 miles*
  - *Elevation: higher (672' MSL)*
  - *Map ID* ◆3◆

Three sites, Subaru of Indiana Automotive Incorporated, Circle K 2408, and BP, are indicated as having leaking underground storage tank(s). Subaru of Indiana Automotive Incorporated is located north of the subject site across the Norfolk and Western Railroad. The other two facilities are located east/northeast of the subject site across I-65. There is no indication of contaminant remediation/clean-up requirements mentioned for these sites within the EDR Radius Report. The existence of petroleum-related contamination associated with the cited facilities does not necessarily pose an environmental concern for the subject site. Potential transport of contaminants to the subject site may be likely and is dependent upon groundwater impacts and transport via groundwater. Based on the surface topography, it may be inferred that the groundwater flow is easterly/westerly from the center of the subject site. However, the extent of potential contamination resulting from the cited facilities may not be fully understood without conduction of more extensive environmental site investigations by a qualified consultant. Full facility information is provided in EDR Radius Report is provided as **Appendix H**.

As the EDR Radius report limits environmental database searches to the subject site and within 1.0 mile of the subject site, the EPA ECHO database was consulted for potential significant environmental concerns within 2.0 miles of the site including active permitted facilities operating under the EPA Clean Water Act, Title V of the Clean Air Act, or the Resource Conservation and Recovery Act (RCRA) for control of solid waste. In limited instances, new air permit applications can be subject to more stringent requirements based on nearby existing permitted facilities' total air emission pollutant volumes and concentrations.



EDR Radius Report Mapped Sites Overview Map

ECHO search results reported a significant regulatory compliance violation of the Clean Air Act within the past year from the Subaru of Indiana Automotive Inc. facility located north of the Steele Industrial Site. Based on the expanded ECHO search, no environmental legacy concerns were identified on the subject site. The ECHO site search results are provided in **Appendix H**.

As with any desktop research exercise, actual potential environmental concerns may not be fully recognized or understood without conducting an on-site field investigation. The industry standard for real estate environmental review is the Phase I Environmental Site Assessment (ESA). Governed by the ASTM E1527: *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The Phase I ESA is designed to investigate property prior to ownership transfer or improvements for use to identify and document any existing or potential contamination that must be addressed or give cause for liability. The Phase I ESA methodology includes more detailed research and review of environmental databases, historical aerial imagery, title research, and on-site field observations of the subject site and immediately surrounding properties. The Phase 1 ESA of the 292-Acre Steele Industrial Site is provided in **Appendix F**.

Connection

Site connectivity includes access to key transportation assets and utility infrastructure sufficient for the use intensity of the subject site. Access to available workforce is also measured within the context of the intended economic development project use (e.g., heavy industrial, light industrial, commercial/freight logistics, etc.). *The Steele Industrial Site is well connected to transportation and utility assets. In conjunction with strong community support and adequate workforce availability, the site is well positioned for competitive response to light industrial project opportunities*.

Transportation Assets are in place to serve the logistical needs of commercial/industrial business operations in the area. *Substantial transportation connections to the site include direct access to a Norfolk Southern rail-line, Indiana state highway frontage across the rail line, and close proximity to interstate access.*

Access is currently available via Newcastle Road, a two-lane highway that runs along the site's western boundary. From the site, truck traffic must travel 1.3 miles down multiple county roads to access U.S. Highway 52 (US 52), a four-lane major collector highway. Traffic must then travel 3.1 miles on US 52, Veterans Memorial Pkwy E, and Indiana State Road 38 (SR-38) to reach Interstate 65 (I-65). While all roadways leading to interstate access appear to be in good condition and suitable for truck traffic, the 4.4-mile distance is considered a challenge. The construction of a new rail crossing along the site's northern central boundary would offer direct connection to SR-38 and greatly increase the site's accessibility. Interstate access from this potential crossing would be about half a mile from the site. Tippecanoe County is reportedly working with Norfolk Southern and INDOT to construct an access road off of SR-38 directly into the property. Site access map is included in **Appendix A**.

Truck Routes are not currently accessible to the subject site, but the construction of the new rail crossing mentioned above would give the site direct access to SR-38. This would connect the site to I-65 for immediate northwest-southeast travel. I-65 could be taken southeast for 63.8 miles to reach Indianapolis and multiple other truck routes including I-70, I-69, I-74, and US 52. Another option is to travel 127 miles to the northwest towards Chicago and the following truck routes: I-94, I-90, I-55, I-80, and I-57. A transportation vicinity map is provided in **Appendix A**.

Railroads run adjacent to the subject site and can be used for the intended light industrial/manufacturing project land uses. The railroad tracks are operated by Norfolk Southern (NS). *The NS track runs along the site's northern boundary and has roughly 1.18 miles of frontage. With over a mile of straight track and no visible encumbrances between the buildable area and tracks, the subject site is in an ideal position for pulling off one or more rail spurs.* A transportation vicinity map is provided in **Appendix A**.

Airport access is beneficial for both corporate executive and other business-related representatives travel to a facility during construction and when operational. Cargo airport access provides opportunity for transportation of process input materials and product distribution. The

Purdue University Airport (LAF) is within 11.7 miles northwest of the subject site (~20-minute drive). LAF is a regional general aviation facility operating two runways at lengths of 6,600 and 4,220 feet. For the 12-month period ending December 31, 2019, the airport had 117,727 aircraft operations, an average of 322 per day: 99% general aviation, 1% air taxi, <1% military/commercial. The airport has commercial charter, corporate and cargo flights that support the aviation needs of Tippecanoe County. LAF is one of the busiest airports in Indiana, second only to Indianapolis International Airport.

The Indianapolis International Airport (IND) is approximately 62.8 miles southeast (~1-hour drive) of the subject site. IND is home to the second largest FedEx Express hub in the world and was ranked as the sixth busiest U.S. airport in terms of air cargo throughput in 2020.

Seaport access is not required for the intended light industrial/manufacturing project uses of the site. However, the nearest seaport is Burns Harbor located within approximately 103 miles (~1.5-hour drive) north of the site. Burns Harbor is located on Lake Michigan in the heart of the steel industry.

Utility Infrastructure is optimal for the subject site. The City of Lafayette provides water service and sewer lines, CenterPoint Energy provides natural gas, electric service is provided by Tipmont REMC through Wabash Valley Power Alliance, and Wintek powered by Tipmont provides fiber internet access. Sewer, electric, and fiber-optic lines all run along Newcastle Road at the site's western boundary. Water, electric, and natural gas lines run along SR-38 at the site's northern boundary. The utility service points of access for extending services to the site are located in multiple locations along the site's northern and western boundaries. Site utility information obtained from the "Local Site Survey Questionnaire" is provided as **Appendix J**. An energy infrastructure and utility access point map is provided as **Appendix A**. **Appendix L** includes maps of proposed water and sewer utility extensions, an electric distribution map, and a fiber internet distribution map.

Potable Water is located one block to the east of the subject site with a 24" line. The line is separated from the site by I-65 and would need to be extended to the site for access. This information was provided by Tippecanoe County in the "Local Site Survey Questionnaire" found in **Appendix J**. Another option for potable water access is found in an engineering plan provided by Christopher B. Burke Engineering LLC. The plan depicts a proposed water line running northwest to southeast along Newcastle Road at the site's western boundary. The origin of the proposed line appears to be an extension from a line located west of the site in an existing industrial park. Current and proposed water service flow/capacities are indeterminate and should be verified on a project-by-project basis with local water utility officials. A map of the proposed utility extensions can be found in **Appendix L**.

Sewer/Wastewater is available to the subject site with a 24" line. This information was provided by Tippecanoe County in the "Local Site Survey Questionnaire" found in **Appendix J**. The provided Christopher B. Burke engineering plan illustrates an existing sanitary sewer line running east to west just below the railroad along the Steele property's northern boundary. Two locations for

sanitary sewer line extensions were proposed in the engineering plan, with one running northwest to southeast along Newcastle Road and another running north to south through the center of the site before heading to the east. Multiple sanitary sewer easement locations were also provided in the engineering plan for the site. Current and proposed capacities are indeterminate and should be verified on a project-by-project basis with local sanitary sewage utility officials. A map of the proposed utility extensions can be found in **Appendix L**.

Natural Gas is located north of the subject site across SR-38 with 12" High Steel, 6" High Steel, 2" PE Medium, and 6" PE Medium lines. This information was provided by Tippecanoe County in the "Local Site Survey Questionnaire" found in **Appendix J**. Current gas service capacity is indeterminate and should be verified on a project-by-project basis with CenterPoint Energy.

Electric power is provided by Wabash Valley Power Alliance through Tipmont REMC Electric with existing service to the site via a 138kV line (12.47 kV/7.2 kV). A secondary substation is located within 2 miles of the site and has a current available capacity of 10 MW (14 MW total capacity). An electric distribution map can be found in **Appendix L**.

Telco/Broadband distribution provided by Tipmont REMC/Wintek is within close proximity to the site. The nearest fiber-optic infrastructure is reported to be situated along Newcastle Road, located at the site's western boundary, and East County Road 75 South, located within 1,200 feet of the site's southern boundary. A map of fiber internet locations can be found in **Appendix L**.

Major Market Areas are accessible within a two-hour drive of the subject site. The site is situated 58.7 miles from Indianapolis to the southeast and 129 miles from Chicago to the northwest with 2019 total populations of 864,447 and 2.71 million respectively. Travel distances to major markets and seaports are provided below. A major market vicinity map is provided as **Appendix A.**

Time and Distance to Major Markets

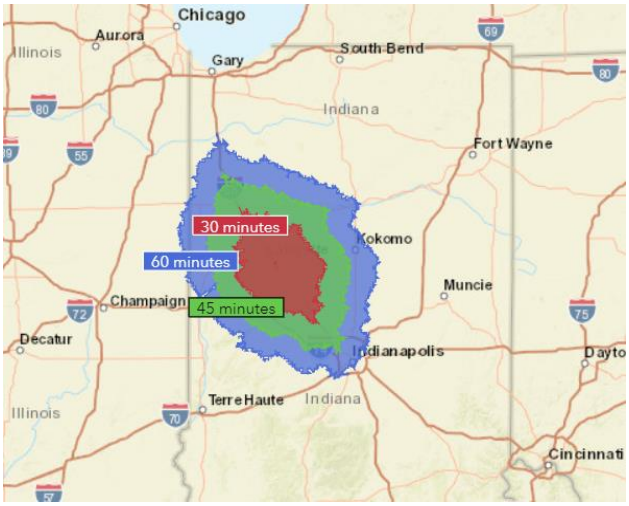
Major Markets	Travel Time	Miles
Indianapolis	1:00	58.7
Fort Wayne	2:11	119
Chicago	2:04	129
Cincinnati	2:42	171
Louisville	2:44	175
Toledo	3:40	217
Milwaukee	3:34	225
Columbus	3:39	232
Lexington	3:51	251
St. Louis	4:17	279
Detroit	4:40	281
Cleveland	5:11	323
Nashville	5:17	350

Time and Distance to Ports

Ports of Indiana	Travel Time	Miles
Burns Harbor	1:41	103
Jeffersonville	2:39	173
Mount Vernon	4:09	240

Community

Community aspects conducive to site competitiveness include both measurable and intangible factors that can either strengthen or undermine a site's inherent competitive advantages. While workforce availability and cultural features are commonly accounted for, business and political climate are often neglected, yet serve as an important indicator for both community and governmental desired to welcome new business investment. The Tippecanoe County community and political leadership are strong proponents of business growth and new job creation, creating a business climate highly conducive to project investment support through efficient permitting, workforce training, and competitive tax structures. Tippecanoe County is committed to supporting long-term industrial and commercial business operations in its communities.



30, 45, 60-minute Drive-time Employment Query

Description of the Economy

Tippecanoe County is located in Indiana, a state that boasts a business-friendly environment, solid infrastructure, and substantial creation of manufacturing jobs. The county falls within the West Central region of Indiana and has a population of 195,732 (US Census Bureau). Lafayette, the county seat, has a population of 71,721 (US Census Bureau). Tippecanoe County is part of the Lafayette, Indiana Metropolitan Statistical Area (MSA), an area consisting of three counties and anchored by the City of Lafayette. The Lafayette MSA has a population of 235,066 as of the 2020 census. Much of the county's economy is concentrated in its two largest communities—Lafayette and West Lafayette. Purdue University, located in West Lafayette, is the largest employer in the county. However, private industries and commerce also exist in the community and function as major employers, with multiple large manufacturing operations in the area employing thousands of people. Heavy Manufacturing is prominent across many industries such as automotive, aerospace, trailers, and large engines.

Demographics

Tippecanoe County has a population density of approximately 381 persons per square mile, exceeding the state average of 183 ppsm, and is the seventh most populated county in the State of Indiana. From 2010 to 2020, Tippecanoe County grew at a rate (13.5%) that was faster than both the State of Indiana (4.2%) and the nation (7.4%). The population is roughly 75.8% White, 8.1% Asian, and 5.19% Black or African American, with most of the county's population consisting of non-Hispanic members, while about 8.3% are Hispanic. The largest age group in Tippecanoe County is 18 to 24 years of age, followed by the 25-to-34-year age group. The county's median age is 28.2.

Employment and the Economy and Income

Tippecanoe County, IN is home to a highly engaged and skilled local workforce with a total resident labor force of approximately 96,929 people. Unemployment (3.7%) is slightly lower than the state average (4.1%). Educational Services, Manufacturing, and Health Care & Social Assistance make up the largest industries in the county, employing 22.1%, 17.2%, and 10.9% of workers, respectively. The Educational Services sector employs 21,397 people, Manufacturing employs 16,712 people, and Health Care & Social Assistance employs 10,611 people. The highest paying industries in Tippecanoe County, by median earnings, are Utilities, Public Administration, and Wholesale Trade, with median annual earnings of $68,786, $48,186, and $45,579, respectively. Median household income is $53,130, which is less than the median annual income of $62,843 across the United States.

Population/Workforce *within a 60-minute drive time from the site include a total population of more than 1,392,850 and 51,432-plus businesses employing over 875,023 people according to Esri 2021 demographic data. Construction, manufacturing, and professional, scientific, & technical services account for 19.2% of businesses employing 13.8% of total workforce within the 60-mile radius of the site*. A 30, 45, and 60-minute drive-time query of employment numbers for construction and manufacturing jobs (by NAICS Code) was performed for the subject site. The following employment numbers were reported:

30, 45, 60-minute Drive-time Employment Count*

Business Type by NAICS Codes	Employees		
	30-min	45-min	60-min
Construction	5,760	7,978	9,611
Manufacturing	3,243	7,096	11,786
Professional, Scientific & Tech Services	12,403	14,261	14,925
Totals	**21,406**	**29,335**	**36,322**

**Source: Copyright 2021 Infogroup, Inc. All rights reserved. Esri Total Residential Population forecasts for 2021.*

Tippecanoe County target industries include Manufacturing, Industrial, High Tech, High Tech Agriculture, and Aerospace. The Steele Industrial Site is suitable to host a variety of Tippecanoe County industry targets, however, it is ideally suited to Light Industrial and Manufacturing projects. With access to a total workforce of over 1,392,850, which includes 87,063-plus employed in construction, manufacturing, and professional, scientific, and technical services sectors, adequate workforce availability should meet medium to large-scale project labor demands of county industry targets. Population and business summary reports are provided in **Appendix I**.

Cultural Features within three miles of the subject site that may pose community risk or public opposition to industrial development are limited and generally do not affect site permitting, construction, or facility operation. Fire and police protection and emergency medical services are within relatively close proximity of the subject site, however, located in the town of Bronson, these facilities do not pose

cross-transportation risks for site construction or facility operation. A cultural features map is provided in **Appendix A**.

Schools are concentrated within the municipal limits of the City of Lafayette. There are two elementary schools, one day care center, and one medical education center within three miles of the subject site. The SIA Child Development Center is located just north of the subject site across SR-38. This is a small day care center located adjacent to the Subaru Lafayette Auto Plant and should not pose any issues to site development. Site buildable area and site ingress/egress road access should not significantly overlap with local school access routes. As such, the site poses no significant operational proximity or transportation risks to schools.

Churches are largely concentrated within the municipal limits of the City of Lafayette. There are five churches within three miles of the subject site buildable area. All churches are sufficiently removed from the operational footprint of the site (e.g., buildable area). As such, the site poses no significant operational proximity or transportation risks to churches.

Cemeteries do not exist immediately proximate to the site or along principal site access routes. One cemetery is within three miles of the site buildable area, though this poses no risk to site permitting or operation.

Group Care Centers including nursing homes, assisted living centers, special education schools, crisis units, and hospice facilities do not exist immediately proximate to the site or along principal site access routes. A single assisted living facility at the Creasy Springs Health Campus is located about 3 miles to northwest of the site boundary but is not seen as a challenge to development.

Other Cultural Centers including libraries, museums and art galleries, movie theaters and performing arts centers, zoos and aquariums, arboreta and botanical gardens, and planetariums do not exist immediately proximate to the site or along principal site access routes.

Parks and Protected Lands do not exist immediately proximate to the site or along principal site access routes. The SIA Recreation Center, baseball field, and fishing pond is located north of the site across SR-38. This area is sufficiently removed from the operational footprint of the site (e.g., buildable area) and is buffered by a small wooded area. Site ingress/egress road access does not intersect or share park access. A protected lands map is provided in **Appendix A**.

Correctional Facilities including federal, state, and local prisons and detention centers do not exist immediately proximate to the site or along principal site access routes.

Fire Protection/EMS is provided by the Lafayette Fire Station 9 located within 2.4 miles of the site boundary/buildable area. The response route is roughly 4-minutes, with trucks taking Veterans Memorial Parkway E to SR-38 and crossing the Norfolk-Southern rail-line. The site's western boundary can also be reached on Newcastle Rd via a 3.0-mile and 6-minute drive. The Sheffield Township Volunteer Fire Department could also be an option and is located east of the site in the Town of Dayton. Fire and EMS response time and capacity should be locally verified.

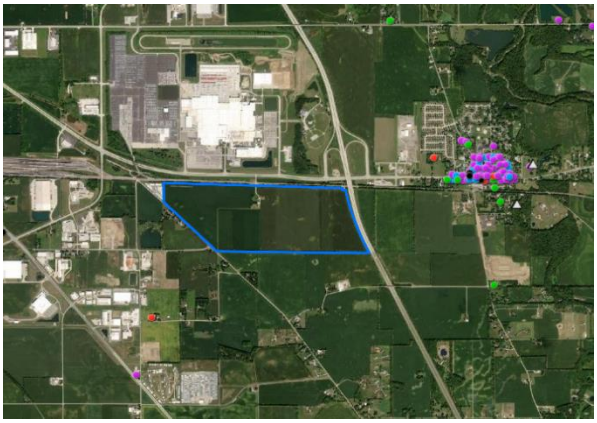
Law Enforcement is provided by the Lafayette Police Department located within 6.1 miles of the site boundary/buildable area. The response route is South Street to SR-38 and is measured as a 13-minute drive time to the site. The Dayton Police Department is located within close proximity to the site's northeastern boundary and could be an option as well. Law enforcement response time and capacity should be locally verified.

Hospital/Emergency Care is provided by two different hospitals within 3-miles of the subject site: Indiana University Health Arnett Hospital and Franciscan Health Lafayette East Hospital. IU Health Arnett Hospital is located 2.7 miles (~5-minute drive time) from the site via SR-38 and Veterans Memorial Parkway E. The hospital is an ACS verified Level III Trauma Center with a helipad and 191 inpatient beds. Franciscan Health Lafayette East Hospital is located 3.1 miles (~6-minute drive time) from the site via SR-38 and S Creasy Ln. The hospital is also an ACS verified Level III Trauma Center with 199 inpatient beds

Historical Preservation records include locations of cultural or archaeological significance, some of which are formally designated as state and/or federally protected historical resources under State Historic Preservation Offices (SHPO) and/or National Register of Historic Places registrations. Historical resources, if located on the subject site, may alter, impede, or preclude development if potential for disturbance or encroachment exists. Historical resources located near the subject site may warrant mitigating site planning and design elements such as line-of-site buffering between facilities and a historically significant structure. The Indiana Department of Natural Resources (IDNR) houses the Division of Historic Preservation and Archaeology (DHPA), which promotes the conservation of Indiana's cultural resources. The DHPA facilitates state and federal preservation programs and is the staff of the State Historic Preservation Office. The DHPA's Archaeology Team administers programs for protecting and preserving Indiana's prehistoric and historic archaeological sites, is the central repository of archaeological records and reports, and houses the state's official computerized database of archaeological site information.

Several cultural resource GIS datasets from the IDNR were consulted for potential location of culturally or historically significant resources on or near the subject site. These datasets are collected and contained within the State Historic Architectural and Archaeological Research Database (SHAARD), which allows users to search cultural resource information on known historic and archaeological resources throughout the State of Indiana. SHAARD includes data from the Indiana Historic Sites and Structures Inventory county survey (IHSSI), the Indiana Cemetery and Burial Ground Registry, historic bridges and canals, historic theaters, and properties listed in the National Register of Historic Places and the Indiana Register of Historic Sites and Structures. The data contained in SHAARD was collected from previously conducted cultural resource inventories, National Register nominations, and cultural resource management projects. SHAARD and associated resource maps are ongoing initiatives and are updated daily, so the absence of data does not necessarily indicate the absence of resources. A more formal archaeological survey may be necessary prior to site development.

A desktop data review was conducted regarding available records for potential cultural resources present on the subject property. *The SHAARD database identified no archaeological sites and no historic structures on the subject site. A single historic structure identified as the "Levi Slayback House" is reported within 1 mile of the subject site. The reported structure (Survey Number 157-612-45010) shown on the corresponding SHAARD web application map is located along East County Road 400 S, approximately 0.6 miles from the subject site's western boundary at Newcastle Road. The Levi Slayback House is listed as an "Outstanding" historic building. It should not present significant impediments to development of the subject site. All other historically significant resources are located outside the 1-mile buffer surrounding the subject site boundary and are not likely to impact site development potential.* The Levi Slayback House SHAARD/IHSSI Report is provided as **Appendix K**, and the Historic Resource search map is provided as **Appendix A**.



SHAARD Map Search

As with any desktop research exercise, actual potential historic preservation concerns may not be fully recognized or understood without conducting an on-site field investigation. The industry standard for real estate environmental review is the Phase I Cultural Resources Survey. The primary objective of a Phase I archaeological survey is to identify and record all cultural resources within a project area. Cultural resources can include prehistoric Native American habitation sites, historic farmstead sites, standing structures, or other man-made features such as earthworks, old roadbeds, or cemeteries. The Phase I survey process typically begins with Phase IA Archaeological Reconnaissance to conduct historical research, environmental context review, and field inspection. When an archaeological site is encountered, a full written report must be submitted following guidance provided in the Current Guidebook for Indiana Historic Sites and Structures Inventory—Archaeological Sites and the Indiana Cultural Resources Manual.

Indiana Code 14-21-1 provides protection for archaeological sites and historic burial sites regardless of their location on state or private lands. All archaeological sites with artifacts dating before December 31, 1870 are protected under this act. Human burial sites are afforded protection under IC 14-21-1, IC 14-21-2, IC 23-14 (Indiana General Cemetery Act). The State of Indiana implements specialized reviews that provide protection to historic properties on state-owned or leased land or to historic properties that are listed in the National Register of Historic Places or the Indiana Register of Historic Sites and Structures and that will be altered, demolished, or removed using state funds. These review processes are established in Sections 14, 16, and 18 of Indiana Code 14-21-1. In addition, projects that will disturb the ground within 100 feet of a cemetery or burial ground for the purpose of excavating or covering the ground or erecting, altering, or repairing any structure are reviewed in Sections 26-26.5. In order to increase the confidence in understanding any potential historical preservation concerns for the subject site, it is recommended

that a Phase I archaeological survey be conducted by a qualified cultural resource management/archaeological consulting professional and that archaeology state laws listed in Title 14, Article 21 of the Indiana Code are thoroughly understood. Relevant sections of the Indiana Code are provided as **Appendix K.** Information regarding Indiana Archaeology Law, complete with links to the full Indiana Code and Indiana Administrative Code, is also provided as **Appendix K.**

Education and Technical Training Assets are strongly positioned to serve professional and technical workforce needs of Tippecanoe County target industries, while colleges and universities provide valuable recruiting opportunities to local businesses.

The Indiana Department of Workforce Development (DWD) offers a variety of services to statewide job seekers looking to enter the workforce, return to the workforce, or locate education and training opportunities. These include Hoosier Talent Network, INDemand Jobs, Indiana Career Explorer, Indiana Career Connect, Cyberseek Indiana, and Indiana Career Ready. The DWD offers several services including job search help, hiring events, training grants, specialized training and more: https://www.in.gov/dwd/.

Indiana's WorkOne Career Centers are the heart of the workforce development system, providing assistance in understanding jobs in demand today, helping workers determine their interests and abilities, offering access to training opportunities, and providing information needed to succeed in today's economy. WorkOne's Job Opportunities and Business Services (JOBS) Program assists employers in locating and developing a skilled team by determining eligibility, recruiting employees, formulating WorkKeys job profiles, and providing skills assessments to identify gaps and training needs. WorkOne's WIN Career Readiness is a fundamental workplace skills training system available to Indiana residents, employers and training providers. Both the DWD's Work Opportunity Tax Credit (WOTC) and Federal Bonding Program benefits employers by offering incentives for hiring jobseekers who may traditionally have difficulty finding employment.

Next Level Jobs provides free training for Indiana workers and reimbursements for Indiana employers for training employees in high-demand fields. Next Level Jobs assists job seekers by providing Indiana residents with free training in high-growth job fields and the opportunity for them to earn a high-value certificate in one of Indiana's in-demand job fields, tuition free. Next Level Jobs assists employers with reimbursements for training their employees through the Employer Training Grant, which will reimburse an employer for up to $5,000 per trained employee who is trained, hired, and retained for six months, granting up to $50,000 per employer.

Greater Lafayette Commerce also leads multiple talent development initiatives in the 9-county region that makes up the Greater Lafayette labor shed. These include job boards, training resources, internship resources, Connecting Veterans program, and TalentTrack regional workforce development program.

Purdue University, located in West Lafayette, Indiana, is a "Big Ten" public land-grant research university and the flagship campus of the Purdue University system. It enrolled nearly 50,000 students in the Fall of 2021. Purdue is known both nationally and internationally as an exceptional school boasting high-quality programs, including in the STEM fields such as engineering, mathematics, and information technology. The university provides rigorous academic programs and is a national and global leader in research, discovery, and innovation, providing ample recruitment opportunities and a reliable potential workforce to the Steele Industrial Site.

Ivy Tech Community College – Lafayette Campus is two-year vocational/technical college within a 3-mile buffer of the subject site. Ivy Tech specializes in developing programs geared towards specific skills needed for existing manufacturers and other industries. Two healthcare-focused higher education facilities are also located near the site: St. Elizabeth School of Nursing and Ross Medical Education Center. The site is well within reach of several colleges and trade schools in the Indianapolis area, including Miller College of Business, International Business College, Oakland City University, Franklin College, American College of Education, and multiple Ivy Tech Community College locations.

Business Climate is highly favorable for bringing in quality job-creating businesses to the area. Indiana is considered one of the best states in the nation for long-term fiscal stability and low corporate income tax rates, creating a business-forward environment throughout the state. The State of Indiana's target Industries according to the IEDC include advanced manufacturing, aerospace and aviation, ag-bioscience, defense, life sciences, logistics and transportation, and technology. These industries can take advantage of existing transportation assets throughout the state and county to serve an array of unique business logistical needs. The following target industries are listed by Tippecanoe County Government: Manufacturing, Industrial, High Tech, High Tech Agriculture, and Aerospace.

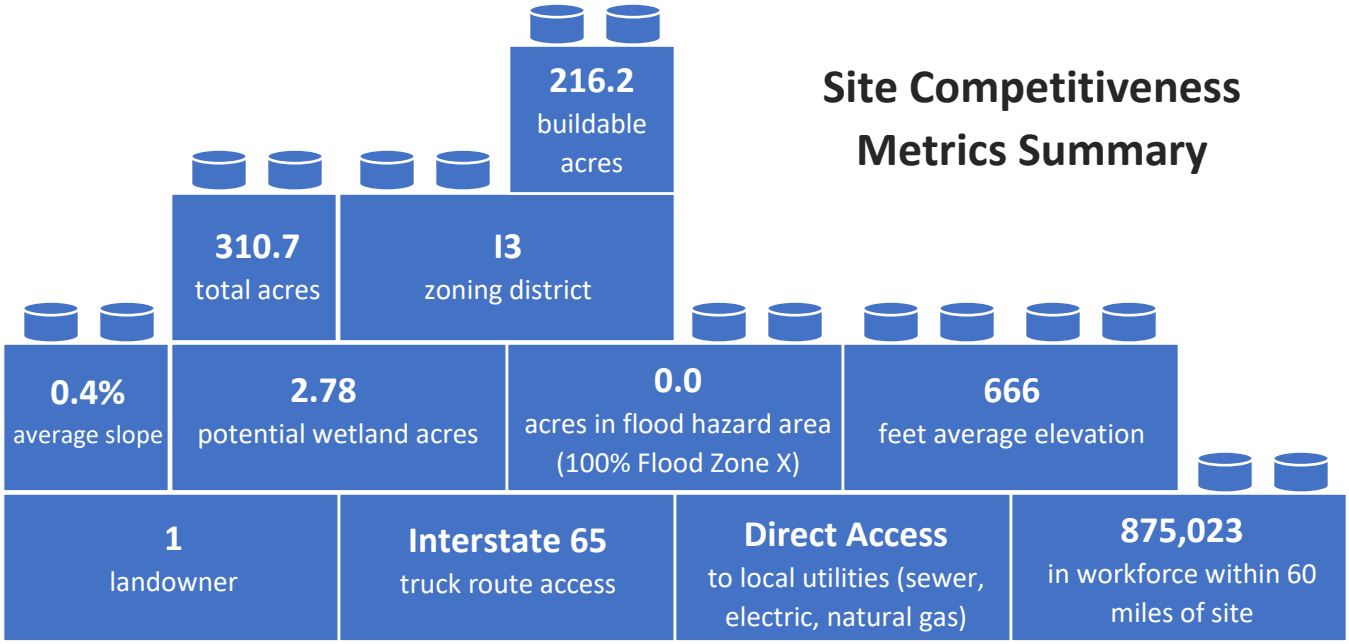
Tippecanoe County has a labor force of 96,929 and an unemployment rate of 3.7%. Business development and assistance is provided locally by Tippecanoe County Government, the City of Lafayette, the City of West Lafayette, and Greater Lafayette Commerce, the region's local economic development entity and chamber of commerce that supports local businesses small and large. Additional business development assistance providers include Talent Track, for analyzing workforce needs and helping businesses attract and retain labor; 21st Century Regional Development Group; Workforce 2030 Council; and the Regional Collaboration Group of Local Economic Developers (also known as Greater Lafayette Economic Alliance).

Both personal and real property abatements are available through Tippecanoe County and its cities. Job training, relocation costs, and other funds (TIF and EDIT Funds) are available through the city and county based on specific project metrics of overall capital investment, number of jobs being created, and wages associated with those jobs.

In addition, the IEDC provides for a variety of programs and initiatives offering business support and expertise to companies that are investing and creating jobs in Indiana. These include the Indiana Regional Cities Initiative, Certified Technology Park program, Broadband Ready Communities program, and Next Level Roads program.

The State of Indiana offers a variety of incentives for all types of businesses, including targeted industries, workforce training, infrastructure and special opportunity incentives. Indiana's business tax structure is competitive—the corporate income tax is decreasing to 4.9%, and the state offers many business tax incentives, corporate tax credits and economic development programs. Statewide incentives include the Community Revitalization Enhancement District (CRED) Tax Credit, Data Center Gross Retail and Use Tax Exemption, Economic Development for a Growing Economy (EDGE) Tax Credit, Industrial Grant Fund (IDGF), Tax Exemption for Patent-derived Income, Skills Enhancement Fund (SEF), Venture Capital Investment Tax Credit program, Hoosier Business Investment (HBI) Tax Credit, Research Expense Credits, Research and Development Sales Tax Exemption, and Redevelopment Tax Credit (RTC).

Political Climate is strong according to interviews with local officials, and the community is largely in favor of commercial/industrial business development to bring long-term economic growth to the area, especially in advanced manufacturing sectors.



Site Competitiveness Report Card

The Site Competitiveness Report Card is an indicator of favorable development conditions across customary competitiveness factors. A relative score for each factor is given as a letter grade, akin to a 4.0 education grade point average (GPA). The GPA is calculated for each competitiveness area: Condition, Connection, and Community with an overall site GPA derived as a relative indicator of site competitiveness for an economic development land use.

Competitiveness Driver

Rough Order-of-Magnitude Site Development Cost Summary

A rough order-of-magnitude (ROM) cost estimation for pre-construction site preparation and utility and transportation infrastructure improvements was calculated to provide a general understanding of potential site development costs. ROM costs were calculated for the 216.2-acre buildable area, which was devised to avoid more costly site leveling due to elevation/slope conditions occurring on the eastern-southeastern perimeter of the site. ROM cost tables for the buildable area are presented below.

Notes:

- *Does not include costs for engineering, permitting, or general project management.*
- *This cost estimate was prepared with the best information available at the time of analysis.*
- *Actual costs can vary based on availability of material, site conditions, and labor.*
- *ROM costs generated from GIS data and use of RSMeans construction cost estimating software.*

ROM Costs for 18157-001 Buildable Area (216.2 acres)

Project: 18157-001
Location: Tippacanoe, IN

WORK ACTIVITY	QUANTITY	UNIT	UNIT COST	SUBTOTAL	TOTAL
ON-SITE PREPARATION					
Site Clearing					
Mobilization	1.00	EA	$40,000.00	$40,000.00	
Demolition (Structure)	1.00	EA	$25,000.00	$25,000.00	
Clearing	5.00	AC	$2,500.00	$12,500.00

				TOTAL	**$2,757,916.27**
				Total Cost Estimate For Site	**$18,166,126.51**

Site Competitiveness Opinion

Overall, the Steele Industrial Site in Lafayette, Tippecanoe County presents notable opportunity for industrial development.

The site has several competitive features that position it as a strategic real estate asset to support economic development. Firstly, the site has rail frontage adjacent to a Norfolk Southern rail line on its northern boundary. With over a mile of straight track and no visible encumbrances between the buildable area and tracks, there is potential to pull off one or more rail spurs. The site also has access to all major utilities including electricity, natural gas, wastewater & sewer, potable water, and broadband/fiber. There is a skilled workforce in the area and a population of nearly 1.4 million within a 60-minute drivetime. The site is located in an ideal corridor between Indiana State Road 38 and Interstate 65 with no sensitive cultural features within close proximity. Finally, there are nearby hospitals, law enforcement, fire protection, and EMS to provide services to future projects on site.

Some opportunities for improvement exist, including truck route access, on-site soil conditions, and potable water access. Currently when leaving the site, truck traffic must travel 4.4 miles using multiple different roads to access the interstate. While all roadways leading to interstate access appear to be in good condition and suitable for truck traffic, the 4.4-mile distance is considered a challenge. The construction of a new rail crossing along the site's northern central boundary would offer direct connection to SR-38 and greatly increase the site's accessibility. Another potential challenge for the site is poorly draining to somewhat poorly draining soils found throughout nearly 90% of the property. Substantial foundation requirements may not be supported by site soil conditions and must be determined through on-site geotechnical engineering investigation. Lastly, while there is a plan in place to bring potable water to the site, it does not appear to be currently available. For any large user locating on site, potable water service will be required. New industry will want to have a clear path forward as to the timeline, costs, and potential sources of funding for the extension.

Upon considering the factors mentioned throughout the SSI Phase II Report, it is the opinion of LL+D that the Steele Industrial Site should be considered a nationally competitive site for attracting quality job-producing light industrial/manufacturing projects to Tippecanoe County. With direct access to rail, all major utilities within reach, adequate workforce availability, and interstate frontage/visibility, the property should be considered very attractive and prime for development. The main impediments to the site are distance from the interstate for truck access, poorly draining soils, and needed expansion of potable water services.

Subject Site Key Facts

Advantages	Disadvantages
Well connected to transportation and utility infrastructure assets	Soil conditions across 85.1% of the subject site are rated as "very limited" for light industrial/commercial development. Overcoming these limitations may require major soil reclamation, special design, or high-cost installation procedures
Railroads adjacent to site that can be used for light industrial/manufacturing projects	
Large buildable area of greater than 200 acres (216 acres) are available	Multiple environmental legacy concerns were identified within 0.25 to 0.5 miles of the subject site, based on the results of the EDR Radius Report and a cursory review of historical aerial imagery
Site has low flood risk, no recorded or observed hydrography features, and minimal wetlands	
Tippecanoe County economic development officials have confirmed that the Landowner is actively promoting the site for sale	ECHO search results reported a significant regulatory compliance violation of the Clean Air Act within the past year from the facility located north of the subject site.
Tippecanoe County community and political leadership are strong proponents of business growth and new job creation creating a business climate highly conductive to project investment	While all roadways leading to interstate access appear adequate for truck traffic, the 4.4-mile distance is considered a challenge. The construction of a new rail crossing along the site's northern central boundary would be required to offer direct connection to SR-38, greatly increasing site accessibility
Population of greater than 1.35 million within 60-minute drive time of the site	
Current/future site land use & zoning are ideal to support future development of the site for industrial land uses	

Purpose and Use of Study

Sites originating from Phase I have demonstrated qualitative compliance with engineering. environmental, infrastructure, and cultural location criteria. That said, in order to develop an actionable understanding of true site competitiveness, a more detailed study of the subject site is required. SSI Phase II: Preliminary Due Diligence is designed for this purpose.

Purpose

The purpose of the SSI Phase II study is to provide an understanding of the subject site's advantages and challenges in conjunction with a ROM cost estimate to improve site functional use and mitigate development challenges. The SSI Phase II study is a desktop-based preliminary due diligence exercise performed by discipline-specific experts with experience in industrial and commercial property development. Study of the subject site's physical and surrounding characteristics, assets, and impediments for development are reviewed in sufficient detail to formulate a defendable opinion on the competitive value of the property for economic development.

Use

There are three primary intended uses of an SSI Phase II report: (1) site advancement decision support; (2) consideration for investment in site improvements; and (3) site marketing. Each intended use is discussed below.

Site Advancement Decision

The SSI Phase II study is designed to provide decision support for the advancement of sites to market though the landowner engagement process. SSI Phase II findings serve as an indicator for the likelihood the subject site will survive the intensive scrutiny of formal, field-based engineering and environmental due diligence. Detection of severe site deficiencies or encumbrances, often referred to as fatal flaws, during desktop preliminary due diligence can avoid expenditure of significant resources in subjecting sites with little chance of survival to formal due diligence. Short of fatal flaws, SSI Phase II may reveal less than ideal conditions or less severe yet concerning challenges that can marginalize site competitiveness or be detrimental to business attraction, respectively. The most important use of the SSI Phase II study is to ensure confidence in the decision to advance sites to market graduation through subsequent phases for landowner engagement and formal due diligence. *Ultimately, site advancement decisions should be tempered by local industry targets and the host community's real estate needs to support those targets.*

Site Improvement Investment Considerations

The findings of the Phase II study, along with an estimate of the ROM costs needed to make functional site and infrastructure improvements, provides concrete data for Economic Development Offices (EDOs) to consider while making investment decisions to improve site marketability. There may be strong business cases for increasing site competitiveness by making incremental investment in infrastructure improvements or mitigation of development challenges. There are many conditions to be considered in investing significant dollars on speculative site improvements including market, economic, fiscal, real estate, and political factors. While the information provided through the SSI Phase II study should not be exclusively considered for site improvement expenditures, the findings may provide an initial quasi prospectus on site development expenditure and associated return-on-investment (ROI).

Site Marketing

The best greenfield site in America is of no consequence to the host community if industry prospects are unaware of its value and availability. Many EDOs invest in branding and marketing campaigns to showcase their community's differentiating attributes to attract business investment. If prematurely launched, many communities unfortunately become "the dog that caught the car". The well-qualified community successfully attracts the serious interest of a prospective company only to lose the project, and possibly credibility for future projects, because it fails to offer a competitive site.

It is the opinion of LL+D, based on extensive industrial and commercial site selection experience, that the methodology, objectivity, and level of detail and completeness provided in this report are sufficient to support the competitive claims of the subject site for its intended project land use(s). Accordingly, the information contained in this report can and should be used to supplement site marketing materials,

specifically for RFI responses and proactive target industry solicitations. However, EDOs should exercise judicious use of SSI Phase II site information for the purposes of site marketing in advance of formal landowner engagement and security of real estate purchase opinion. The real estate purchase option is pursued during SSI Phase III: Landowner Engagement.

Warranty

All Phase II project tasks are intended to serve as an informed guide to determination of site advancement to the formal due diligence phase of inventory development. All information and opinions provided in this report are limited to planning-level engineering and environmental considerations and do not rise to the investigative level of study for site design uses.

All data used in this study originates from public domain sources. All findings derived from the use of public domain data are subject to potential errors and omissions inherent digital data sets which may include spatial and attribute accuracy, completeness, and currency. Data and other information cited in this study has not been verified for quality of accuracy. As such, the confidence in findings provided herein and corresponding opinions are subject to the limitations of the data and other information sources consulted in the conduct of this study.

Ultimate site development potential and fatal flaw analysis cannot be determined without physically visiting the site and conducting formal engineering and environmental due diligence. However, Leotta Location and Design is confident that our site screening methodology is highly effective in eliminating low quality or practically undevelopable sites and presents candidate sites with a high likelihood of confirming results through more formal engineering and environmental due diligence.
