Indiana Strategic Sites Inventory Program

A Statewide Economic Development Initiative

February 23, 2020

About the SSI Program

The Strategic Sites Inventory (SSI) Program was created to increase community competitiveness in economic development by strengthening the quality of commercial and industrial real estate assets. Communities with strong workforce, infrastructure, education, and other key competitiveness attributes often lose projects due simply to the fact they don't have a suitable site to support the investment. The SSI Program provides a proactive location competitiveness solution through advance site selection. Only the highest quality properties are considered for graduation to market ensuring unmatched site competitiveness. Potential strategic sites are subjected to an a-political, strict quality standard for industrial and commercial land development. The rigorous SSI site qualification process is governed by detailed engineering and environmental due diligence investigations coupled with a comprehensive determination of community-readiness for hosting capital-intensive economic development projects. The SSI Program was created with a singular focus: "quality sites = quality projects = quality jobs".

237 potential sites and counting!

Indiana SSI Program History

The Indiana SSI Program began with a Duke Energy funding grant to the Indiana Economic Development Corporation (IEDC) in late 2018. With IEDC's staff participation, the State of Indiana has achieved remarkable progress toward identification of high-quality real estate assets for economic development. To date, searches have been conducted in 87 of 92 counties to discover greenfield sites with excellent characteristics for a variety of quality job producing projects. SSI project land uses include heavy industrial, light industrial, commercial/freight logistics, R&D/tech, business park, and agribusiness. To date, more than 200 potential high-quality strategic sites have been discovered. Indiana will soon begin realizing revenue and job ROI as SSI Program sites graduate to the open real estate market.

SSI Program Value to Community

In summary, communities cannot compete for quality economic development projects without quality, market-ready real estate assets. This statewide product development program endeavors to aggressively build a strategic inventory of high-quality greenfield sites to ensure Indiana communities have the real estate assets required to remain globally competitive for quality job-creating business investments.
